Cybersecurity Capability Maturity Model

Understand Your Cybersecurity Gaps to Set Your Strategy and Priorities

How a Maturity Model Can Quickly Advance Your Cybersecurity Program

Traditional risk assessments can produce hundreds of findings making it difficult to prioritize where you need to focus your efforts to improve security. Traditional risk assessments can also take a long time to complete and don't create alignment between teams.

The CloudWave Sensato Cybersecurity Capability Maturity Model (C2M2) produces actionable findings, creates a foundation for strategy and investment, and achieves boardroom-to-basement alignment.

"There is no other risk assessment program that provides the clarity, practicality or return on investment achieved by CloudWave's Sensato C2M2 program."

– Patrick Neece, CIO
  Lake Regional Health System

Sensato C2M2

CloudWave's Sensato Cybersecurity Capability Maturity Model (C2M2) quickly identifies priorities and provides the foundation for an achievable cybersecurity strategy.

Achieve the following goals with a Cybersecurity Capability Maturity Model:

- Achieve boardroom-to-basement alignment
- Actionable findings and recommendations
- Create a foundation for cybersecurity strategy and investment
- Identify current state as quickly as possible
- Integrate with current security efforts
- Support compliance and regulatory requirements

CloudWave

Evaluation of Cybersecurity Top Priorities

- Evaluated on ten domains, based on cybersecurity best practices
- Each domain is a logical grouping of cybersecurity practices
- Cybersecurity practices are grouped by objective and target achievements considered critical best practices for that domain

Integrated Results

- Get an immediate understanding of your gaps and priorities
- Results are cross walked to NIST-CSF, NIST 800-53, and HIPAA
- Customized program providing an integrated maturity model and risk assessment that supports regulatory requirements
- Receive a toolkit of results to set your short-term and long-term cybersecurity strategies
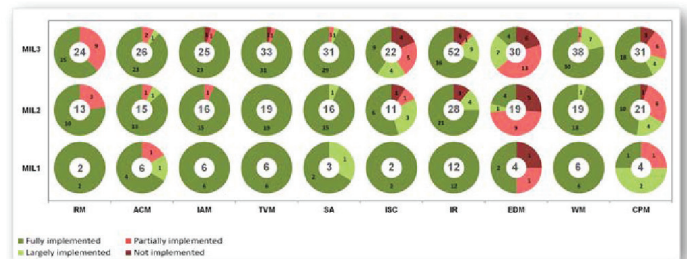

Rapid Deployment

- Average workshop can be completed (including results) in less than 45 days
- Get a single boardroom-to-basement alignment understanding of current cybersecurity maturity

CloudWave's Sensato C2M2 program is designed to go beyond just checking the box, and provides you with a set of tools that can supercharge your cybersecurity program to ultimately protect your data and your patients.

Easy to Understand Dashboard

The C2M2 dashboard can be used to engage your colleagues, executive team, and board members and is the cornerstone for strategy planning, risk prioritization, and investment analysis.

The dashboard provides a visual representation of your current status and can be run quarterly to understand your progress over time.

The Toolkit

The C2M2 program includes a set of reports, debriefings, and guidance tailored to your audience and requirements. Some examples include:

- Detailed findings by domain
- Specific actionable task-based recommendations, cross-walked to NIST-CSF, 800-53, and HIPAA
- High-level strategy prioritization
- Detailed roadmap to achieve identified goals
- Board and team briefings
