better together.

Support/skill-building groups bring people who share a common experience together to talk. You'll get to connect with people who are going through similar struggles to share ideas, help one another, and learn new techniques to manage pain such as deep breathing.

serve yourself.

Dietary changes and optimizing your nutrition can relieve pain in a number of ways. Some diets might reduce bad inflammation for conditions like arthritis, while a weight loss diet might help take some strain off of painful joints.

keep track.

Online pain trackers or apps can make it easier for you to log your symptoms and keep track of possible triggers. Using a tracker or app can make it easier for you to show your doctor what's wrong.

your mind matters.

Counseling or **psychotherapy** gives you a safe place to work out thoughts and feelings that can make your pain worse while helping you learn skills to manage and relieve distress. Ask your doctor if mental health support might help you.

close the loop.

Biofeedback may help you calm your mind and control your heart rate, blood pressure, and breathing rate—all things that can contribute to pain. Relaxing and releasing tension can help you feel better.

rub it in.

Massage can reduce stress and tension while improving circulation, letting you heal faster while helping you feel better. Massage can be especially helpful for chronic back and neck pain.

good posture.

Through **chiropractic care**, experts treat your muscles and bones without surgery or medication. These treatments can be especially helpful for reducing lower back pain and increasing overall mobility. Ask your care team if chiropractic care is right for you.

Dietary supplements are any vitamins, herbs, or other nutrients that enhance your diet. They might come as caplets, pills, tablets, or liquids and can be found in many grocery stores.

get moving.

Gentle exercises such as yoga or dancing can help decrease pain by improving your range of motion.

get online.

Discovering **internet resources** can help you to take your care into your own hands, as they allow you to educate yourself about your options. You may find online support networks especially therapeutic.

stretch it out.

Physical therapy can help you recover both your strength and full range of motion, which can help reduce some of your pain. Specialists will teach you exercises to help you heal properly without injury.

Acupuncture uses very small needles to improve blood and nutrient circulation in the body. It can reduce your pain, improve your mobility, and can allow you to take fewer medications.

listen to your body.

When pain comes on, modify activity. Rest can help to reduce certain types of pain by taking the strain off of hurt or overworked muscles or joints. Be sure to ask your care team first, as some motion can help stop pain.

look within.

Some people find that **mindbody integration practices** like yoga, relaxation, mindfulness, deep breathing, meditation, selfhypnosis, or prayer help them calmly find an emotional center from which to manage their pain more effectively.

so hot. so cool.

Heat can help relax and soothe your joints and muscles, while **ice** is useful for reducing inflammation and numbing pain. (You should ask your provider which strategy is best for you.) You can make your own hot or cold pack out of common household items.

TENS (Transcutaneous Electrical Nerve Stimulation) uses a low-voltage electrical current

uses a low-voltage electrical current to ease pain. It's a small machine that you carry with you—you can even be trained to use it yourself.

created by UC Davis Center for Design in the Public Interest in partnership with Hill Country Health and Wellness Center and North Carolina Healthcare Foundation

You have options.

You can manage pain in a number of ways. Ask your provider how to mix and match.
